
KOUGAR SPEED AND MOBILITY

PARAMOTOR

NIVIUK.COM

Developed for the future using innovative and technical solutions the Kougar is the paramotor wing for experienced pilots looking for stability, maneuverability and speed. A new PPG designed and built with Niviuk passion.

Take off and landing

With the Kougar both taking off and landing is possible at very low speeds, translating into the need for less forward motion to take off and softer more controlled landings. Once in the air the trimmers can be easily and accurately adjusted to achieve cruise speeds which are perhaps the fastest in its class.

Low consumption

The advanced Reflex System Profile requires less power from the engine to achieve greater thrust resulting in lower fuel consumption and higher overall engine efficiency.

Extreme stability

Speed and agility are enhanced by the high level of stability offered by the Kougar throughout the entire speed range and during unexpected turbulence.

Technical data

			23	25	28
Flat	Area	M ²	23	25,5	28
