A WILL TO ACHIEVE PERFECTION

In designing the ICEPEAK 3 we at Niviuk have created a competition glider with even better performance than its predecessor the Icepeak XP, however we have also ensured within the design that the security and easy piloting characteristics of the Icepeak XP have been maintained. The ICEPEAK 3 offers many advances in design technology and with its new and unique MSV (Mesh Speed Valve) system you will soon discover a new and higher level of security and performance. In thermals and during transitions, as the airflow through the open ports increases and decreases the MSV system will automatically adjust

(open/close) according to your speed. We have also introduced the new IRS (Internal Reinforcement System) which is an advanced reinforcement system offering more stability and less movements of the glider during turbulence. These new systems along with a re-designed "low effort" speed system for smooth and significant speed transitions and a minimalistic but very efficient line plans have allowed us to bring you Supreme Performance.

TEAM WORK

The very first Icepeak from Niviuk was released in 2006 and since that date Olivier Nef and his design team have not become complacent. They continued to research, develop and refine the Icepeak 06, which ultimately resulted in the release of the very successful Icepeak XP. Now, using the very latest advancements in R&D technology, their added years of research and after many prototypes and exhaustive testing, Olivier Nef and the team at Niviuk have now brought to you the ICEPEAK 3.

PERFORMANCE FROM TECHNOLOGY

To achieve such a high performance we have further developed the technology already used in the design the Icepeak XP. With the IRS and MSV system, completely new geometry, a flatter wing with an aspect ratio of 7.5, fewer lines and the proven security of the XP, the ICEPEAK 3 is the wing for pilots wishing to reach the highest point on the podiums. The Icepeak XP was superb and from that we have brought you new technology available in the ICEPEAK 3. Available in two colours and with seven sizes available, the ICEPEAK 3 offers the perfect weight range for all pilots.

A GENETICALLY ADVANCED WING

We have years of data from our winning Icepeak and Icepeak XPs, we have the experience and feedback from world-class pilots from around the world, we have many competition successes and we have the best design team and technology in the world. With all this information and expertise we can bring you a truly genetically advanced wing...the ICEPEAK 3
