

ARROW P

How to add a second parachute

1. Begin by removing the cockpit that comes pre-installed on the Arrow P harness.
2. Replace the removed cockpit with the [Kase P parachute front container](#). Make sure to securely fasten the Kase P onto the carabiners.
3. The velcro strap back on the Kase P can be utilized as a makeshift cockpit and attach your flying instruments there.

(!) Please note that while this modification may not result in a seamlessly integrated appearance, it is a functional solution for adding a second parachute to your Arrow P. Make sure to test the setup thoroughly and ensure it meets safety standards before use.

In the next page you have some reference pictures with the result of how the Kase P parachute front container should be installed on the Arrow P.
