

SAFETY NOTICE

Recommendations on installing a parachute in the KONVERS 2 harness

The parachute compartment of the KONVERS 2 has been designed on the basis of the dimensions of the CIRES and OCTAGON 2 parachutes when folded and placed in a square container.

It is not recommended to install any parachutes smaller than those listed below for each size of the Konvers 2.

Recommended sizes for Niviuk parachutes

The recommended parachute sizes for each size of the Konvers 2 are as follows:

Konvers 2	Cires	Octagon 2
S	M	S/M
M	M	S/M
L	M/L	M/L/XL
XL	M/L	M/L/XL

Recommended sizes for other parachutes

If you are using a parachute from another manufacturer, it is recommended that the parachute be folded square and that it be packed in a square container, and that the parachute and the container comply with the following range of sizes (length/width/height in cm):

Konvers 2	
S	22x22x10 - 24x24x13
M	22x22x10 - 24x24x13
L	22x22x13 - 23x25x16
XL	22x22x13 - 23x25x16

Other safety recommendations:

- Regularly inspect the correct installation of your parachute. The parachute is your last resort in an incident and if it becomes necessary to deploy it, it is of the utmost importance that it is in perfect working condition.
- Inspect and repack your parachute at least once a year. We recommend contacting a professional parachute packer to supervise this activity.
